

TEERAPAB BOONSRI

BUSINESS ANALYST

PROFESSIONAL SUMMARY

Business Information Systems candidate with hands-on experience translating stakeholder requirements into working systems serving 3,000+ real users. Skilled in requirements elicitation, business process analysis, and functional specification — with enough technical depth (cloud, databases, APIs) to communicate effectively with engineering teams. Seeking a Business Analyst internship to bridge business needs and technical execution in a cloud enterprise environment.

PROJECT EXPERIENCE

FMS Election System Development (Official System) | Dec 2025 – Present

System Analyst / Core System Developer

- Elicited requirements from student union committee and faculty staff, translating them into system workflows, ER diagrams, and functional specifications for the faculty's official election platform
- Defined business rules for vote integrity (eligibility verification, double-voting prevention) — system processed 1,643 authenticated votes from 3,119 eligible voters with zero integrity incidents
- Identified a recurring business need for annual rebranding by non-technical staff and specified a configurable content system, eliminating developer dependency for future elections
- Coordinated integration with university authentication APIs, aligning technical constraints with security and data privacy requirements

Cloud-Based Chatbot Development (PSU Chatbot) | Oct 2025

System Analyst & Cloud Developer

- Gathered user requirements and designed structured conversation flows on Microsoft Azure (Bot Service + Language Studio) for accurate intent recognition in university inquiries
- Performed cost-benefit analysis on cloud resource allocation, optimizing performance under strict budget constraints
- Delivered results recognized with a top grade and an invitation to develop the official faculty version

TECHNICAL PROFICIENCY

- Business Analysis: Requirements Elicitation, Business Process Flow, Functional Specification, ER Diagram & Data Modeling
- UI/UX & Prototyping: Wireframing, Figma
- Cloud & Systems: Microsoft Azure, REST API Integration, PostgreSQL, Web Application Architecture
- Tools & Productivity: Git/GitHub, AI-Assisted Workflow, Prompt Engineering
- Language: Thai (Native), English (Working Proficiency), Japanese (Conversational)

EDUCATIONAL BACKGROUND

Prince of Songkla University | 2023 - Present

Bachelor of Business Administration

- Major: Business Information Systems (BIS)
- Faculty: Management Sciences
- GPAX: 3.05
- Expected to graduate in 2027

CORE COMPETENCIES

- Strong stakeholder communication — experienced eliciting requirements from committees, staff, and end users
- Able to translate business needs into functional specifications and system logic
- Technical fluency to bridge business and engineering teams across the SDLC
- Fast learner, adaptable to new tools and enterprise environments
