

TEERAPAB BOONSRI

SYSTEM ANALYST

PROFESSIONAL SUMMARY

Business Information Systems candidate with a hybrid skill set in system analysis and technical implementation. Experienced across the full SDLC - from translating business requirements into structured system logic to deploying cloud solutions on Microsoft Azure. Adept at leveraging Generative AI to accelerate workflows. Seeking a cooperative education (internship) opportunity to apply analytical and technical insights in an enterprise environment. Committed to delivering reliable systems that solve real problems for real users.

PROJECT EXPERIENCE

FMS Election System Development (Official System) | Dec 2025 – Present

System Analyst / Core System Developer

- Analyze business and system requirements to design system architecture and relational database schemas (ER diagrams) using Prisma ORM.
- Develops the core system using Next.js 14, ensuring application stability and consistent deployment through Docker containerization.
- Design and implemented critical business logic, including double-voting prevention mechanisms, to ensure strict data integrity.
- Integrate NextAuth.js with university APIs to manage secure access for 3,119 eligible voters, successfully processing 1,643 authenticated votes while ensuring zero double-voting cases.

Cloud-Based Chatbot Development (PSU Chatbot) | Oct 2025

System Analyst & Cloud Developer

- Designed a modular cloud-native solution on Microsoft Azure, integrating Azure Bot Service and Language Studio to support scalable knowledge management.
- Translated user requirements into structured conversation flows and system logic, ensuring accurate intent recognition for university-related inquiries.
- Managed cloud infrastructure with cost optimization and resource tuning strategies to maximize performance under strict budget constraints.
- Developed a custom web interface (HTML/JavaScript) to enable seamless user interaction and support future API scalability.

TECHNICAL PROFICIENCY

- System Analysis: Requirements Analysis, System Logic Design, Process Flow Diagramming, ER Diagram & Database Modeling
- Web & Application Development: Next.js, React (Component-Based Architecture), HTML, CSS, REST API Integration
- Database: PostgreSQL, Prisma ORM, SQL
- Cloud & Deployment: Microsoft Azure, Docker, Cloud Resource Management
- Tools & Productivity: Git, GitHub, Visual Studio Code, Figma, AI-Assisted Development, Prompt Engineering

EDUCATIONAL BACKGROUND

Prince of Songkla University | 2023 - Present

Bachelor of Business Administration

- Major: Business Information Systems (BIS)
- Faculty: Management Sciences
- GPAX: 3.03
- Expected to graduate in 2027

CORE COMPETENCIES

- Proficient in system-oriented problem solving applied to requirement analysis and solution design
- Strong structured and logic-driven approach to system and workflow development
- Strong ability to learn and adapt to new technologies and system tools quickly
- Able to collaborate effectively with technical teams throughout the software development lifecycle
